We feel that our biggest strength today is our ability to provide customized Access solution to each of our valued customers.

**Our Mission**

To help organizations improve their profitability through the application of intelligent technologies in the field of office automation, quality control automation, biomedical & security solutions. To become the world's leading solution provider using biometrics, RFID, image processing and other related technologies.

**Our Objective**

To consistently deliver high quality products, solutions & services that will exceed customer's expectations. The solutionsthat will benefit customers to grow their business, which in turn will result in customer satisfaction, long term businessrelationship & eventually result strong market credibility for our company.

**Introduction**

Founded in 2015, SPANET is the customer-driven company, developing and offering innovative solutions to serve customers using electronic infrastructure, better service & support, and better distribution channels. We take pridein calling ourselves as pioneer in category of image processing solutions for quality control, 3-D image biomedical software,package solution for office automation & security.Our head-quarters is in Pune & we operate through regional offices in Latur. Also we have dealer network spread across all over India. Our 'Embedded' branch has developed and is offering integrated biometric/RFID solutions and applications for organization security & automation. We offer complete package solution for secured access, attendance, payroll, HR management & other office automation processes.

We have done a pioneering effort in introducing and creating an awareness of these latest technologies in India. Our associates and business partners as well as our customers worldwide, have provided us tremendous support in all our endeavors. For the starting period, however, organizations ignored the field because it was too obscure, too esoteric, or too expensive. All this appears to be changing. Indian Corporate who till now showed a laid back approach towards security/automation, are now fast learning the power of new tools and the value addition it can provide to their business.
